What does Bringspring do

Tracking system challenges in China

As a cyber hospital, we store many customers' health data in the database, but the property right of these data does not belong to us, so we do not have the right to use the customer's data.

How to use the health big data to deal with the epidemic prevention and control work is still under exploration. We have completed a rapid tracking system for the location of infectious persons for some cities, but in fact this tracking system is only allowed to be used in an emergency. The protection of the privacy of citizens has been taken into consideration.

Chinese society is increasingly concerned about the protection of the privacy of individuals

The fake news challenge

Everyone on the Internet can become a self-media. It makes the truth often harder to discern. People have more difficulties to trust in each other. And fake news has misled a lot of people, with extremely serious consequences.

This is what I especially want to communicate with you. How can the facts be given the opportunity to clarify and at the same time protect the right to speak freely.

So far I haven't seen a good solution for it.

谢谢！

Thank you
