Lab 1: Transformative Teaching Methods

❖ *Katrin Muff, Dean, Business School Lausanne, Switzerland*

THERE IS

NO

PLANET B

“We believe, all of us own the responsibility to bring about change”

50plus20.org/film

The world has become
VUCA – volatile, uncertain, complex
and ambiguous. New mega trends, such as
demographic shifts, digital transformation, broken systems
or climate change are creating a new landscape with new
opportunities and risks. Social media redefines corporate reputation
and stakeholders use their voice to actively question the purpose of the
organization in relation to societal, environmental and economic problems.
Social entrepreneurs link business with solving these problems, thus shifting
organizational boundaries. The challenge of the next decades is to develop future-
capable solutions with the potential to propel an organization in new fields of
activity, exploring markets that don't yet exist. Such innovation requires companies to

- ✦ develop a strategic resilience, and
- ✦ build leadership competencies for the future.

Personal development takes time, so does a strategic innovation. Yet, time
is running out: there is an increasingly large gap between organizational
efforts and the state of the world. This gap can be seen in many ways: the
technology gap, the generation gap, speed-of-transformation gap, the
workplace gap, etc. The time is ripe to dedicate a full year part-time
to quantum leap forward in both domains.

Problem

Solution

Aha!

Global Ethics Course

- A collaborative initiative:

UN PRME + WBSCSB + GRI

Launched at the RIO+20 conference

The Collaboratory

The Collaboratory

Join us at 14.45 -16.45 in the LAB1

Feel free to contact us for any next steps!
